

Ceramic Frit Spandrel

Ceramic Frit Spandrel Glass manufactured by Nashville Tempered Glass and distributed by Gulf Coast Glass Products conforms to *ASTM C 1048, Condition B*.

Process:

The Ceramic Frit is applied to the top surface of the glass, where it is then fused to the glass during the heat treating process. Spandrel can be either heat strengthened or tempered per the request of the customer.

Application:

All of Nashville Tempered's spandrel glass is designed to be glazed in an opaque background and is not recommended for use in transoms, partitions or other areas where a dark background or "shadow box" is not available.

Inspection Guidelines:

Glass will be manufactured to conform to *ASTM C 1048, Condition B*. Color and reflectance may vary slightly when viewed against an opaque background and is considered acceptable. Pinholes and scratches viewed in reflectance are considered acceptable as long as they are not obvious.
